casc_BTCUSDT_overview.png

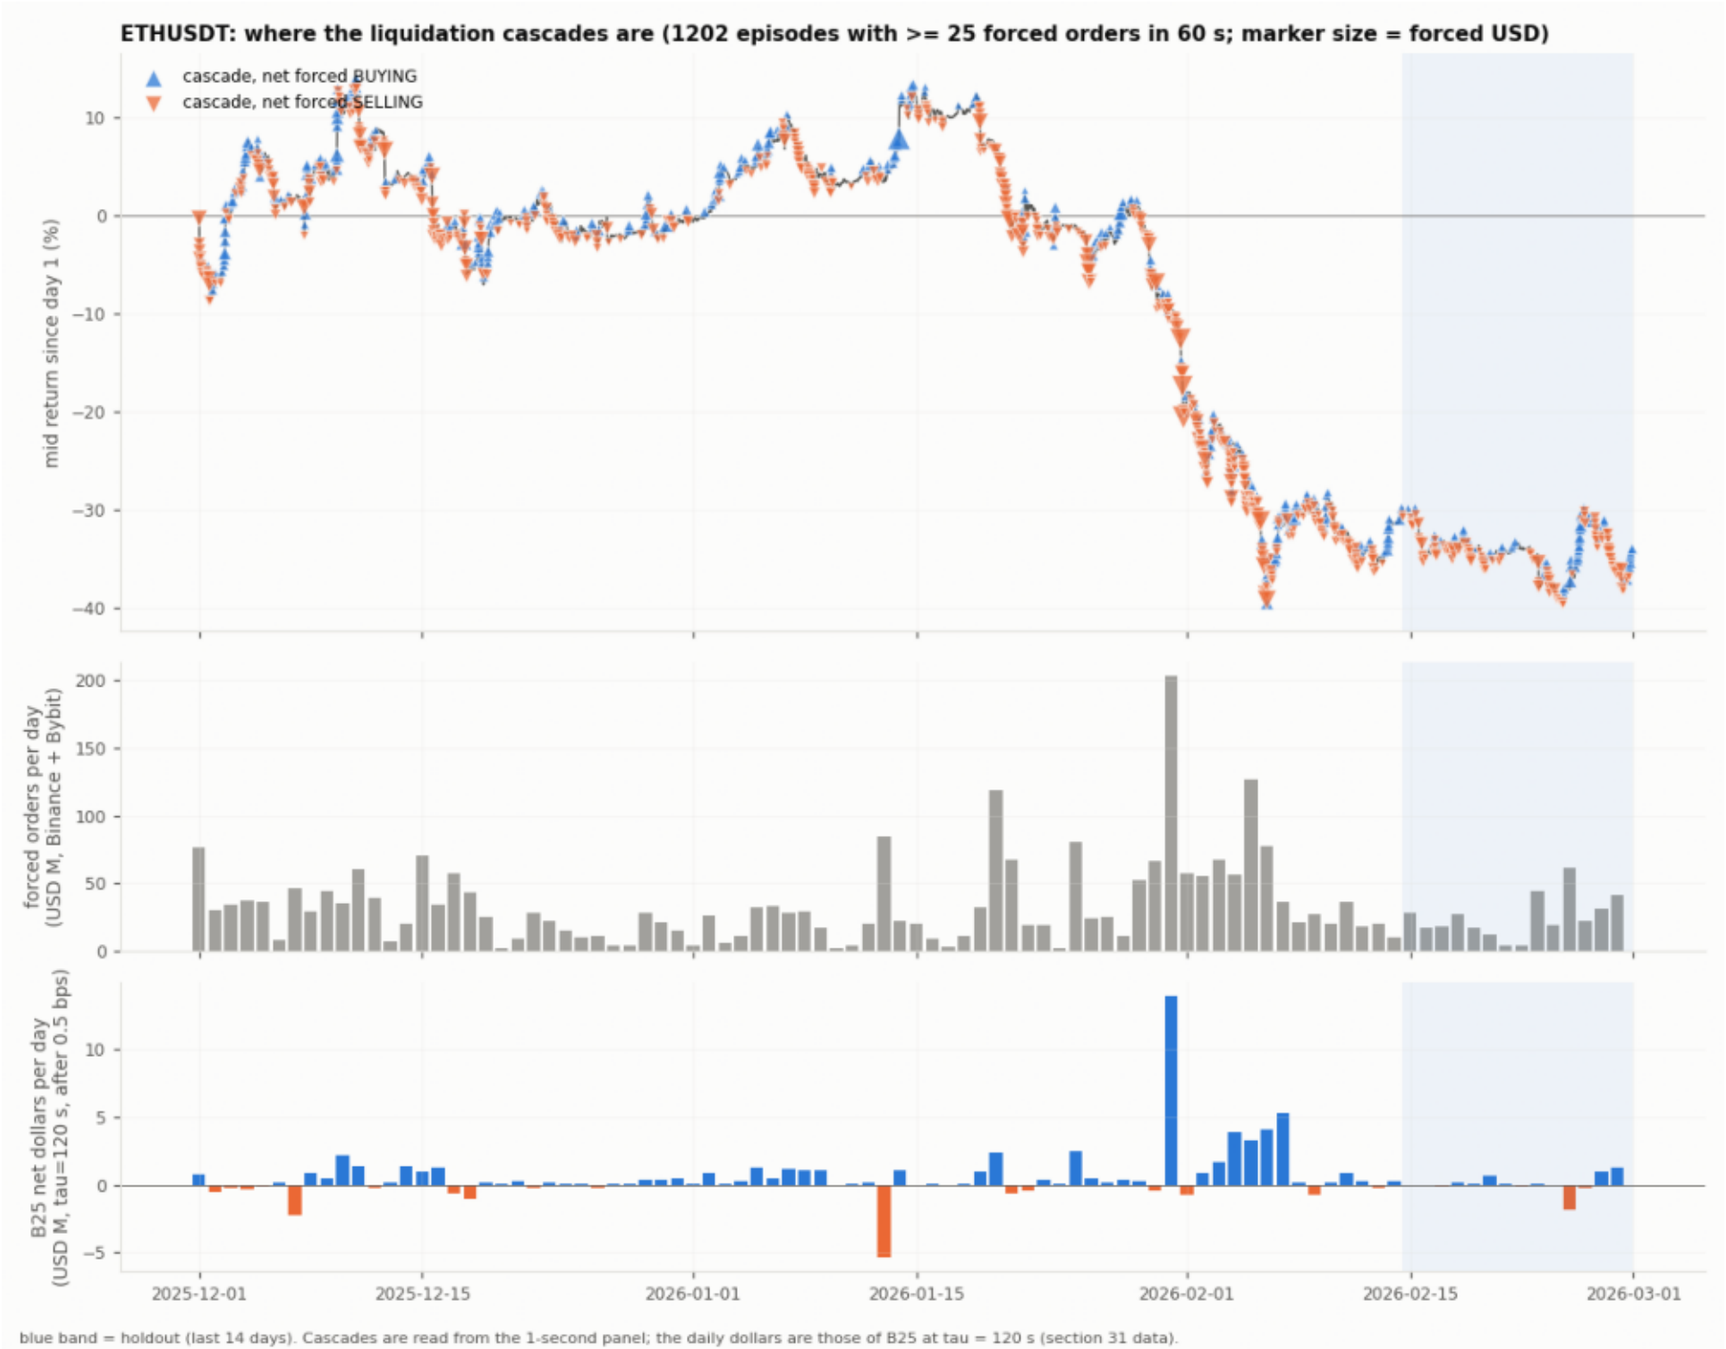

casc_BTCUSDT_zoom.png

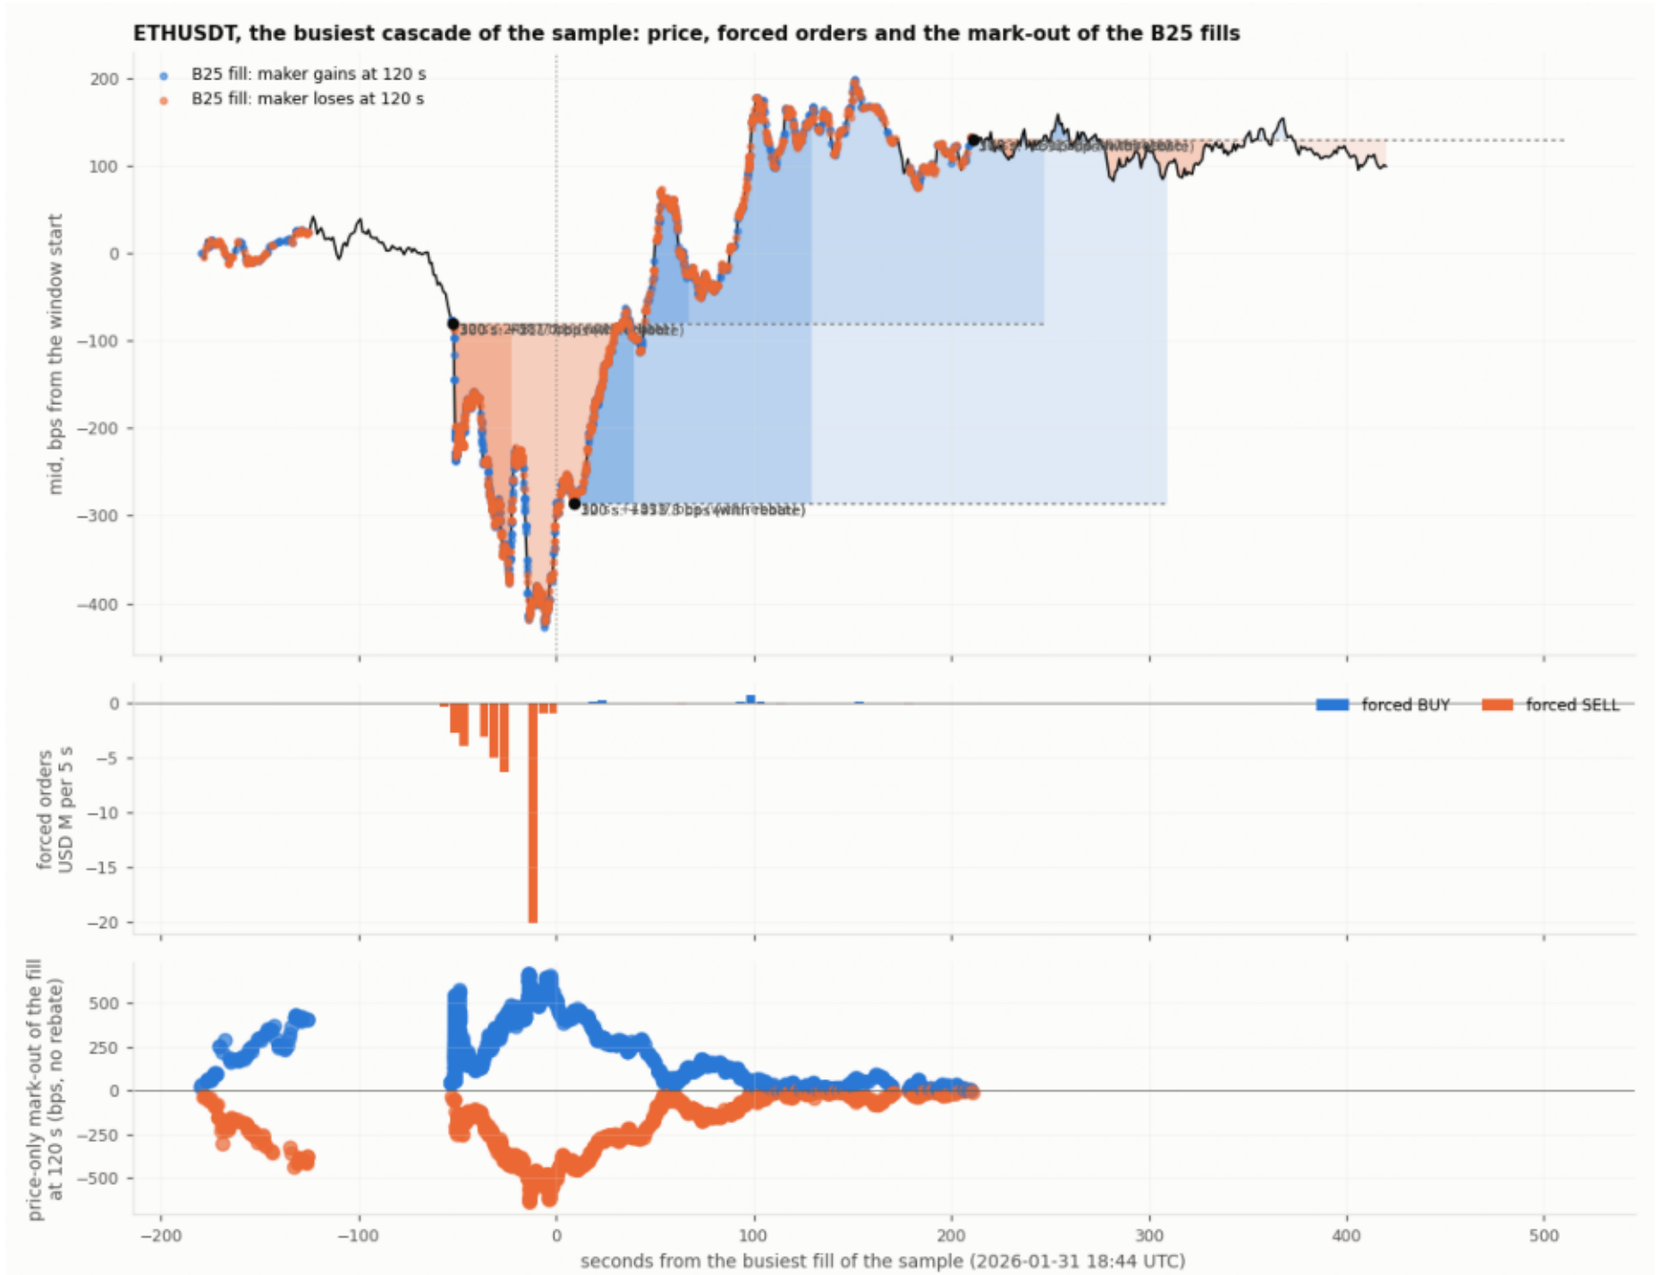

How to read: a taker BUYS into a forced-buying cascade and lifts the maker's ask; the maker has SOLD at the fill price (black dot, half a spread above the mid). The mark-out is the area between that price and the mid at t + tau: the price falls back (reversal) -> blue, the maker gains; it keeps rising -> orange. Shaded for tau = 30, 120, 300 s (darker = shorter). +0.5 bps rebate is added on top.

casc_ETHUSDT_overview.png
